

Instructions for SweatStop® Sprays

To develop their sweating and odor blocking effect, SweatStop® antiperspirants have to be applied **directly before going to bed** on **completely dry** and clean skin. In order that the solution can permeate and that the salts can close the pores, anything that could enhance the formation of sweating in the hours after the application needs to be avoided. The application needs to be repeated every 2-3 days. In the morning washing as usual and, if desired, applying a deodorant or a skin care lotion is possible. The effect will become evident after 1-3 applications. In rare cases it may take longer to unfold.

- Clean and dry respective part of the skin **before going to bed**
- **Apply only to completely dry skin**
- Apply **once**
- Leave on until completely dry before putting on clothes to avoid stains

Indication for facial application and application on the head (without hair): It is recommended applying the lotion SweatStop® Aloe Vera Lotion plus+ first. Only if required, apply a SweatStop® antiperspirant with a higher product intensity, like for instance SweatStop® Aloe Vera Forte. SweatStop® sprays need to be applied with a piece of cotton wool in this case.

Indication for application on the head (with hair): It is recommended applying the spray SweatStop® Aloe Vera Sensitive first. Only if required, apply a SweatStop® antiperspirant with a higher product intensity, like for instance SweatStop® Aloe Vera Forte. In case of colored hair it is to be tried out carefully as the application of an antiperspirant could possibly lead to discoloration.

For all SweatStop® antiperspirants please note:

- Avoid anything that could enhance the formation of sweating in the hours after the application
- Avoid contact with eyes, mouth and irritated or harmed skin
- Do not shave respective part of the skin for at least 48 hours before and 12 hours after the application
- Let it dry completely before putting on clothes to avoid stains
- Keep out of reach of children
- Note for all customers with US delivery address only - due to FDA regulation: All antiperspirants are to apply to underarms only
